## Appendix: Data Sources and Definitions

This appendix contains the details concerning the construction of all the variables used in the construction of TCH Bank Conditions Index (TCHBCI). The aggregate index synthesizes data on 23 indicators grouped over the following six categories: Capital, liquidity, risk-taking, asset quality, interconnectedness, and profitability. This appendix details the construction of each of the 23 indicators across the six bank categories. All series are first aggregated across all banks, numerator and denominator separately. All bank-level data are obtained from the Consolidated Financial Statements for Bank Holding Companies (the FR Y-9C form) published by the Federal Reserve Board or the Consolidated Reports of Condition and Income (the FFIEC 031/041 form, or also known as the Call Reports) for commercial banks published by the Federal Deposit Insurance Corporation. Most series start in the first quarter of 1996 and end in the second quarter of 2016.

Note on International Holding Companies: In 2016:Q3, 11 institutions entered the sample as International Holding Companies. The change in entity type for these eleven institutions caused an artificial break in the series. As is such, in the 2016:Q3 update of the TCHBCI, they were dropped from the sample back in time:

| Institution Name | RSSD ID |
| :--- | :--- |
| Credit Suisse Holdings (USA), Inc. | 1574834 |
| Barclays US LLC | 5006575 |
| DB USA Corporation | 2816906 |
| UBS Americas Holding LLC | 4846998 |
| BNP Paribas USA, Inc. | 1575569 |
| TD Group US Holdings LLC | 3606542 |
| HSBC North America Holdings Inc. | 3232316 |
| MUFG Americas Holdings Corporation | 1378434 |
| RBC USA Holdco Corporation | 3226762 |
| Santander Holdings USA, Inc. | 3981856 |
| BMO Financial Corp. | 1245415 |

## Capital

The common equity tier 1 ratio is defined as common equity tier 1 (Basel III definition) divided by risk weighted assets from 2014:Q1 to 2016:Q2. Prior to 2014:Q1 it is defined as tier 1 common divided by risk-weighted assets. The tier 1 common is defined as tier 1 capital, less perpetual preferred stock and related surplus, minority interests, qualifying restricted core capital elements. After the first quarter of 2014, risk-weighted assets are calculated as the maximum of risk weighted assets calculated under the standardized approach and risk-weighted assets calculated under the advanced approach for the advanced approaches institutions.

| Series | Formula |
| :--- | :--- |
| Tier 1 common equity | BHCA8274 - BHCK3283 - BHCKG214 - BHCKG215 - BHCKG216 + BHCKB588 <br> from 2001:Q1 to 2014:Q1 |
| Common equity tier 1 | BHCAP859 for advanced approach banks and Tier 1 Common Equity from <br> 2014:Q1 to 2014:Q4. BHCAP859 after 2014:Q4 |
| Risk-weighted assets | BHCKA223 from 1996:Q1 to 2014:Q4 and max(BHCAA223, BHCWA223) <br> afterwards. |

| Tier 1 common equity (detailed version) | Schedule | Line <br> Item | MDRM | Dates Used |
| :--- | :--- | :--- | :--- | :--- |
| Tier 1 Capital | HC-R | 26. | BHCA8274 |  |
| Qualifying Class A noncontrolling (minority) <br> interests in consolidated subsidiaries | HC-R | $6 . a$. | BHCKG214 | 2009:Q1-present |

| Disallowed goodwill and other disallowed <br> intangible assets | HC-R | BHCKG215 | 2009:Q1-present |  |
| Perpetual Preferred Stock and Related Surplus | HC | 23. | BHCK3283 |  |
| Nonqualifying perpetual preferred stock | HC-R | 5. | BHCKB588 | 2001:Q1-present |
| Common equity tier 1 capital (item 12 minus <br> item 18) | HC-R | 19. | BHCAP859 | 2014:Q1-present |
| Total risk-weighted assets (from Schedule HC- <br> R, Part II item 31) | HC-R | $40 . a$. | BHCAA223 | 2015:Q1-present |
|  | HC-R | 62. | BHCKA223 | 1996:Q1-2014:Q4 |
| Advanced Approaches holding companies that <br> exit parallel run only): Total risk-weighted <br> assets using advanced approaches rule (from <br> FFIEC 101 Schedule A, item 60) | HC-R | $40 . \mathrm{b}$. | BHCWA223 | 2015:Q1-present |

Tier 1 capital ratio is defined as tier 1 capital divided by risk-weighted assets.

| Name | Schedule | Line <br> Item | MDRM | Dates Used |
| :--- | :--- | :--- | :--- | :--- |
| Tier 1 Capital | HC-R | 26. | BHCA8274 | 2014:Q1-present |
|  | HC-R | 11. | BHCK8274 | 1996:Q1-2013:Q4 |

Total capital ratio is defined as total capital divided by risk-weighted assets.

| Series | Formula |
| :--- | :--- |
| Total capital | BHCK3792 from 1996:Q1 to 2013:Q4 and max(BHCA3792 BHCW3792) <br> afterwards. |

| Name | Schedule | Line | MDRM | Dates Used |
| :--- | :--- | :--- | :--- | :--- |

|  |  | Item |  |  |
| :--- | :--- | :--- | :--- | :--- |
| Total capital (sum of items 11, 18, and 19, less <br> item 20) | HC-R | $35 . \mathrm{a}$. | BHCA3792 | 2014:Q1-present |
|  | HC-R | 21. | BHCK3792 | 1996:Q1-2013:Q4 |
| (Advanced approaches holding companies that <br> exit parallel run only): Total capital | HC-R | $35 . \mathrm{b}$. | BHCW3792 | 2014:Q1-present |

Leverage Ratio is defined as tier 1 capital divided by average total assets.

| Name | Schedule | Line <br> Item | MDRM | Dates Used |
| :--- | :--- | :--- | :--- | :--- |
| Average total assets for leverage capital <br> purposes (item 22 less items 23 through 26) | HC-R | 27. | BHCAA224 | 2015:Q1-present |
|  | HC-R | 27. | BHCKA224 | 1996:Q1-2014:Q4 |

Market leverage ratio under stress is defined as in Acharya et al (2014) and is constructed as the ratio of the market capitalization to quasi market value of assets under NYU's V-Lab System Risk Analysis stress scenario. NYU's V-Lab website provides the long-run marginal expected shortfall (LRMES), leverage (LVG) and the book value of debt (D) for each bank. ${ }^{1}$

| Series | Formula |
| :--- | :--- |
| Market leverage ratio <br> under stress | $\frac{\mathrm{MV}(1-\mathrm{LRMES})}{\mathrm{MV}(1-\mathrm{LRMES})+\mathrm{D}}$ |

## Liquidity

The following definition of the maturity gap is taken from English, Heuvel and Zakrasjek (2014) Section 4.1.1. Maturity Gap is the difference between average repricing/maturity period (in years) of assets and average repricing/maturity period (in years) of liabilities.

$$
G A P_{i t}=\sum_{j} m_{A}^{j} \frac{A_{i t}^{j}}{A_{i t}^{I E}}-\sum_{k} m_{L}^{k} \frac{L_{i t}^{k}}{L_{i t}}
$$

The first part of the equation is the weighted-average repricing/maturity period of bank $i$ 's assets, where $j$ indexes the 26 interest-earning asset categories reported on the Call Report by remaining

[^0]maturity or next repricing date. ${ }^{2}$ The second part of the expression on the right-hand side of the equation is the weighted-average repricing maturity period of bank $i^{\prime}$ 's liabilities, where $k$ indexes the 11 liability items reported on the Call Report by remaining maturity or next repricing date. The quantities $A_{i t}^{j}$ and $L_{i t}^{k}$ are the dollar amounts in asset category $j$ and liability category $k$, respectively, reported by bank $i$ in quarter $t$. The terms $A_{i t}^{I E}$ and $L_{i t}$ denote bank $i^{\prime}$ s total interest-earning assets and total liabilities (calculated as total deposits), respectively. The variables $m_{A}^{j}$ and $m_{L}^{k}$ represents the estimated average repricing/maturity period (in years) for asset category $j$ and liability category $k$, respectively. For assets or liabilities with fixed maturity, the Call Report captures the range of months (or years) remaining until the asset or liability matures; for assets or liabilities with floating rates or variable maturity, the Call Report records the range of months (or years) until the next repricing date. We set the average repricing/maturity period of each asset category $j$ or liability category $k$ to the midpoint of that category's maturity or repricing range on the Call Report. ${ }^{3}$

| Item | Formula |
| :--- | :--- |
| Total liabilities ${ }^{4}\left(\sum L_{i t}\right)$ | sum(RCON2215m RCON2385) from 1997:Q2 |

Short-term wholesale funding (STWF) is calculated as the sum of other borrowed money, commercial paper, federal funds (purchased, and agreements to repurchase), other borrowed money with remaining maturity of 1 year or less, and brokered and time deposits with remaining maturity of 1 year or less. STWF is divided by total assets. Breakdown of deposits by maturity is unavailable before 1996:Q1 and is approximated using the share of deposits with remaining maturity of 1 year or less in 1996:Q4.

| Series | Formula |  |

HQLA (high quality liquid assets) is the numerator of the LCR (liquidity coverage ratio) and is comprised of assets that can be quickly converted to cash with little or no loss of value. In general, these assets have low risk and low volatility. The proxy for HQLA from 1994 to 2016 used in the analysis is defined as:

$$
H Q L A=\text { Level } 1 \text { Assets }+0.85 \times \text { Level } 2 A \text { Assets }
$$

The ratio of Level 2A Assets to HQLA must not exceed 40\% at the bank level.

## Risk-Taking

Changes in lending standards is the net percentage of banks that reported tightening standards on commercial \& industrial loans to large and middle market firms. This variable uses data from the Senior Loan Officer Opinion Survey on Bank Lending Practices, a survey of large domestic banks (and US branches of foreign banks) conducted by the Federal Reserve on a quarterly basis.

| Series | Notes |
| :--- | :--- |
| Changes in Lending <br> Standards | Net percentage of banks tightening standards on C\&l loans to large and <br> middle market firms |

The loans to GDP series is constructed by diving total loans with nominal gross domestic product. Data on total loans is taken from the Federal Reserve's H. 8 aggregate balance sheet for all domestic commercial banks. Nominal gross domestic product data was taken from the St. Louis Federal Reserve's Federal Reserve Economic Data (FRED) database.

| Series | Schedule | Line | MDRM | Dates Used |

| Total loans and leases (consolidated) | HC-C | 12. | BHCK2122 |  |

## Interconnectedness

The Herfindahl index series is calculated by summing the square of the ratio of assets held by each of the top minimum bank holding companies divided by total assets. 'Top minimum bank holding companies' refers to the minimum number of bank holding in a quarter, from 1996:Q1 to the present quarter. ${ }^{17}$

| Name | Schedule | Line <br> Item | MDRM | Dates Used |
| :--- | :--- | :--- | :--- | :--- |
| Total Assets | HC | 12. | BHCK2170 |  |

Exposure to financial entities is calculated by dividing loans to financial depository institutions plus federal funds sold and securities purchased under agreements to resell as a percent of total assets with total assets. Loans to financial depository institutions include loans to U.S. banks and depository institutions, as well as to foreign banks.

| Series | Formula |
| :--- | :--- |
| Exposure to Financial <br> Entities | (BHCK1292 + BHCK1296 + BHDMB987 + BHCKB989)/BHCK2170 |

| Total Assets | HC | 12. | BHCK2170 |  |

[^9]CoVaR is calculated as the average CoVaR of the 8 U.S. G-SIBs. ${ }^{19}$ A measure created by Tobias Adrian and Markus Brunnermeier, CoVaR captures the marginal contribution that an individual institution has to systemic risk; it is what happens to the financial system when an institution changes from "normal" to "stressed". ${ }^{20}$ We followed Adrian and Brunnermeier (2011) to calculate the CoVaR for each of the 8 U.S. G-SIBs, using weekly data from January 1, 1995 until the most recent quarter. Values for weekly data are taken from the Friday, or the Thursday before if the Friday is a holiday. Data on the independent and dependent variables was compiled from SNL Financial, while the macroeconomic state variables were compiled from the St. Louis Federal Reserve's Federal Reserve Economic Data (FRED) database as well as equity market return data from Yahoo Finance. ${ }^{21}$ To aggregate CoVaR, we calculated quarterly data by averaged the weekly values of CoVaR across the 8 institutions.

## Profitability

Return-on-assets (ROA) is measured as net income divided by total consolidated assets.

| Series | Formula |
| :--- | :--- |
| Return on assets | BHCK4340/BHCK3368 *400 |

| Name | Schedule | Line <br> Item | MDRM | Dates Used |

[^0]:    ${ }^{1}$ The sample of firms used to calculate the ratio consisted of: Bank of America Corp, BB\&T Corp, The Bank of New York Mellon Corp, Citigroup Inc, Commerce Bancshares Inc, CIT Group Inc, Capital One Financial Corp, Fifth Third Bancorp, Goldman Sachs Group Inc, Huntington Bancshares Inc, JPMorgan Chase \& Co, KeyCorp, Morgan Stanley, M\&T Bank Corporation, New York Community Bancorp Inc, People's United Bank, PNC Financial Services Group, Regions Financial Corporation, Sun Trust Banks Inc, State Street Corp, U.S. Bancorp, Wells Fargo \& Co, Zions Bancorp.

[^1]:    ${ }^{2}$ The sample of firms used to calculate both the maturity gap and the proxy for the net stable funding ratio series is constructed based on the bank universe of the H. 8 sample in terms of Call Report codes detailed in "Construction of Aggregate and Regional Bank data Using the Call Reports Data Manual" by den Haan, Sumner, and Yamashiro (2002).
    ${ }^{3}$ Maturity/Repricing time of : less than 30 months was recorded as 0.125 years, 3 to 12 months was recorded as 0.625 years, 1 to 3 years was recorded as 2 years, 3 to 5 years was recorded as 4 years, 5 to 15 years was recorded as 10 years, greater than 15 years was recorded as 20 years, less than or equal to 3 years was recorded as 1.5 years, greater than 3 years was recorded as 5 years, less than 1 year was recorded as .5 years, greater than 1 year was recorded as 2 years, 1 to 5 years was recorded as 3 years, and greater than 5 years was recorded as 10 years.
    ${ }^{4}$ Total weighted liabilities ( $\sum m_{L}^{k} L_{i t}^{k}$ ) is the sum of the 11 liability items below (except for total deposits), where each item is multiplied by the corresponding midpoint maturity/repricing time
    ${ }^{5}$ Total weighted interest-earning assets ( $\sum m_{A}^{j} A_{i t}^{j}$ ) is the sum of each of the 26 asset items below (and as listed in the formula for total interest-earning assets), where each item is multiplied by the corresponding midpoint maturity/repricing time.
    ${ }^{6}$ For all Interest Earning Assets balance sheet items, calculations were made using the call report item with the largest value (RCON vs RCFD).

[^2]:    ${ }^{7}$ Prior to 2011:Q1, the sum of RCONK219 and RCONK220 was the equivalent to RCONA244.

[^3]:    ${ }^{8}$ Prior to 2014:Q1, the share of wholesale deposits was estimated using deposits in 2014:Q1 as a proxy, adjusted for the gap between large time deposits and foreign deposits
    ${ }^{9}$ RCFD indicates consolidated data on the call report and was used where possible. In some cases commercial banks reported either domestic or foreign data.

[^4]:    ${ }^{11}$ RCONP755 discontinued after 2017Q1; definition used going forward is RCONB459-(RCONP753+RCONP754)
    ${ }^{12}$ Tier 1 Capital restructured to RCOA8274 and RCFA8274 post 2014:Q1

[^5]:    ${ }^{13}$ Aggregate federal funds purchased and repos only available on 2010 call reports

[^6]:    ${ }^{14}$ Prior to 2001:Q1 BHCK3190 is calculated as the sum of BHCK2309, BHCK2332, and BHCK2333 from Schedule HC-M

[^7]:    ${ }^{15}$ Securities received in repo (which is not negligible for some banks) are not reported on the balance sheet and could not be included in the proxy for HQLA.

[^8]:    ${ }^{16}$ Domestic only

[^9]:    ${ }^{17}$ The minimum number of BHCs per quarter from 1996:Q1 to 2016:Q2 was 601.
    ${ }^{18}$ Prior to 1997:Q1, federal funds and repos were the sum of BHCK0276 and BHCK0277.

[^10]:    ${ }^{19}$ The 8 U.S. G-SIBs are Bank of America, Citibank, J.P. Morgan, Wells Fargo, Morgan Stanley, Goldman Sachs, Bank of New York Mellon, and State Street.
    ${ }^{20}$ Adrian, Tobias and Brunnermeier, Markus K., CoVaR (September 2011). FRB of New York Staff Report No. 348.
    ${ }^{21}$ All state variables from Adrian \& Brunnermeier (2011) were included except the short-term liquidity spread.

[^11]:    ${ }^{22}$ Prior to 2009:Q1, derivatives (BHCM3543) was calculated as the sum of BHCK3543 and BHCK3543. Prior to 2002:Q1, the sum of BHDMB987and BHCKB989 was calculated as the sum of BHCK1350.
